

Department of Public Works

Month of March Summary

The month of March we spent a lot of time working on gravel roads. We used about 950 tons of stone on the roads. We raked and used the grader to help dry them out and save on stone. They seem to be drying out and stiffing up. With the nice weather we thought we were going to be able to start grading some of them but mother nature had other plans.

We had one small snow storm which we had to scrape and treat the roads and we had one large storm that brought a mixed bag of weather. We were out for just over twenty- four hours for this storm. We had several trees and limbs come down taking out power lines and closing roads. All roads were back open on Monday morning.

With the nice weather that was here we took advantage to start cleaning up the town hall and some of the cemeteries. Cleaning up some of the trees and limbs also.

Equipment held up okay. HT-15 Brian had to put in a fuel pump and a new fuel tank due to the old one rusted out. Brian also took advantage of being a little slower and doing some maintenance on the mowers getting them ready for the mowing season.

Thank you,

Adam , Director of Public works
