

Department of Public Works
Month of February Summary

The month of February was an up and down weather month, we had to plow or just treat the roads three times. We had salt and sand hauled in to fill the salt shed filled back up. We also had some ice spots from ground water we had to treat and scrape off the roads.

With the quiet weather we where able to haul in some gravel and stone to have on hand.

The middle of the month the temperature went up and we had some spots on the gravel roads that we addressed with stone. We also took advantage of the warmer weather and raked some of the roads which helped with some of the tire ruts and potholes.

The end of the month the temperature really warmed which led to more mud and posting the weight limits. We had 400 ton of stone hauled in and we turned used almost all the 400 tons on Wednesday the 28th and had 300 tons more hauled in on Thursday the 29th which we started to use right away.

Ht-15 received the new motor and is back in service. H6-24 went into full service and had it's first couple of storms with no issues.

Thank you,
Adam , Director of Public Works
